The other instructions below:

Basic Instructions for PowerSchool CCAT:

1. The Criteria Cognitive Aptitude Test (CCAT) is a general pre-employment aptitude test that measures problem-solving abilities, learning skills, and critical thinking.
1. The CCAT practice test consists of 50 questions in logic, math, verbal ability, and spatial reasoning, and has a 22-minute time limit.
2. Do not spend too much time on any one question, skipping difficult questions is allowed.
3. If you find yourself stuck, guess. Guessing does not take off points and it's certainly better than leaving a question unanswered.
4. Pay attention to the answer choices. Sometimes ruling out unreasonable answers can prove to be an efficient problem solving strategy.
5. **Please take this test seriously. The borderline cases may be given second chance, But most of the candidates should get through in one chance itself.**

Please access the sample test on the following link for practicing the test yourself before coming for the main CCAT.
